Company Description:

MoBe is a R&D company specializing in software for mobile devices. It has been established as an academic spin-off of the University of Udine by a group of computer scientists, working in different fields, who have in common the interest on mobile devices (mobile phones, PDAs, ...). MoBe provides software and hardware infrastructure and consultancy for distributing location-aware information and applications, in order to convert mobile devices into active objects that will adapt themselves to the environment.
